

Standard Test Methods for Determining Chemical Durability of Nuclear, Hazardous, and Mixed Waste Glasses: The Product Consistency Test (PCT)¹

This standard is issued under the fixed designation C 1285; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 These product consistency test methods A and B evaluate the chemical durability of homogeneous and devitrified glasses by measuring the concentrations of the chemical species released from a crushed glass to a test solution.

1.1.1 Test Method A is a seven-day crushed glass chemical durability test performed at $90 \pm 2^\circ\text{C}$ in a leachant of ASTM-Type I water. The test method is static and conducted in stainless steel vessels. Test Method A can specifically be used to evaluate whether the chemical durability and elemental release characteristics of nuclear, hazardous, and mixed waste glasses have been consistently controlled during production. This test method is applicable to radioactive and simulated waste glasses.

1.1.2 Test Method B is a crushed glass durability test that allows testing of waste glasses at varying test durations, test temperatures, mesh size, mass of glass, leachant volume, and leachant types. This test method is static and can be conducted in stainless steel or PFA TFE-fluorocarbon vessels, or both. Test Method B can specifically be used to evaluate the relative chemical durability characteristics of homogeneous or devitrified glasses, or both. This test method is applicable to radioactive (nuclear) and mixed, hazardous, and simulated waste glasses. Test Method B cannot be used as a consistency test for production of high level radioactive waste glass.

1.2 These test methods must be performed in accordance with all quality assurance requirements for acceptance of the data.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*
