

Designation: D 4573 – 9803

Standard Test Method for Rubber Chemicals—Determination of Oil Content in Oil-Treated Sulfur¹

This standard is issued under the fixed designation D 4573; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This test method covers the determination of the amount of hydrocarbon oils added to oil-treated sulfurs. The test method is employed when the amount of oil added is 1 % or more of the total sample.

1.2 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

2.1 ASTM Standards:

¹ This test method is under the jurisdiction of ASTM Committee D-11 on Rubber and is the direct responsibility of Subcommittee D11.11 on Chemical Analysis .
Current edition approved Nov. 10, 1998; June 10, 1998; 2003. Published December 1998; June 2003. Originally published as D 4573 – 86; approved in 1986. Last previous edition approved in 1998 as D 4573 – 958.
