

Designation: D6458/D6458M – 19

Standard Tables of Body Measurements for Boys, Sizes 4 to 20 Slim and 2 to 20 Regular¹

This standard is issued under the fixed designation D6458/D6458M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

INTRODUCTION

These tables were developed from data published by the U.S. Department of Commerce. These data were based on original research conducted by the U.S. Department of Agriculture² in the 1930s. This standard takes into consideration children's growth patterns reflected in the 1980 charts for the National Center for Health Statistics³ and the 1977 Anthropometric Study of U.S. Infants and Children conducted by the University of Michigan⁴ and 2000 CDC Growth Charts for the United States⁵ and CDC Advance Data No. 361, Dated 7/5/2005.⁶ All sudden shifts of proportion have been eliminated so as to reflect the gradual growth and development of the child. To verify the proposed body measurements, a three-dimensional Avatar was created in the size range by Alvanon Inc.⁷ for a visual reference and also attached in the documentation. Terminology D5219 data was removed and references to the standard were made to avoid duplicity and ease management of standard.

1. Scope

1.1 These tables list body measurements of boys sizes. Although these are body measurements, they can be used as a baseline in designing apparel for boys in this size range when considering such factors as fabric type, ease for body movement, styling, and fit.

1.2 The maximum age for the Boy's chart is 15 years old to the size 20.

1.3 The size table includes the range of toddler sizes; these values are for both girls and boys and will be included in the girl's standard as well.

¹ These tables are under the jurisdiction of ASTM Committee D13 on Textiles and are the direct responsibility of Subcommittee D13.55 on Body Measurement for Apparel Sizing.

Current edition approved May 1, 2019. Published June 2019. Originally approved in 1989. Last previous edition approved in 2012 as D6458 – 12. DOI: 10.1520/D6458_D6458M-19.

⁶ CDC Advance Data from U.S. Department of Health and Human Services, *Vital and Health Statistics Number 361, 2005 Anthropometric Reference Data for Children and Adults: U.S. Population, 1999-2002*.

⁷ Alvanon, Inc. 145W 30th Street Suite 1000, New York, NY 10001.

1.4 These tables list body measurements for the complete range of Boys sizing. (Regular, Slim) Slim subjects are of same stature (height), with a slimmer body, and lower body weight than regular subjects as illustrated by the measurement charts.

1.5 The values stated in either inch-pound or SI units are to be regarded separately as standard. The values stated in each system are not necessarily exact equivalents; therefore, to ensure conformance with the standard, each system shall be used independently of the other, and values from the two systems shall not be combined.

1.6 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.7 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*
