

Designation: D6695 – 24

Standard Practice for Xenon-Arc Exposures of Paint and Related Coatings¹

This standard is issued under the fixed designation D6695; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope*

1.1 This practice covers the selection of test conditions for accelerated exposure testing of coatings and related products in xenon arc devices conducted according to Practices [G151](#) and [G155](#). This practice also covers the preparation of test specimens, the test conditions suited for coatings, and the evaluation of test results.

NOTE 1—This practice and ISO 16474-2 address the same subject matter but differ in technical content.

1.2 The values SI units are to be regarded as standard. The values given in parentheses are for information only.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*
