

Designation: D 6762 – 02~~€1a~~

Standard Test Method for Determining the Hiding Power of Paint by Visual Evaluation of Spray Applied Coatings¹

This standard is issued under the fixed designation D 6762; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (€) indicates an editorial change since the last revision or reapproval.

~~€¹ NOTE—Research report was added editorially in July 2002.~~

1. Scope

1.1 This test method provides for the quantitative visual determination of the film thickness required to achieve full hiding. This film thickness is considered to be the hiding power of a test paint.

1.2 This method applies only to spray applied coatings but its concepts are valid for other methods of application as well.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

2.1 *ASTM Standards:*

¹ This test method is under the jurisdiction of ASTM Committee D01 on Paint and Related Coatings, Materials, and Applications and is the direct responsibility of Subcommittee D01.26 on Optical Properties.

Current edition approved ~~March~~ Dec. 10, 2002. Published ~~May~~ February 2003. Originally approved in 2002. Last previous edition approved in 2002 as D 6762 - 02^{€1}.
