

Designation: E 1193 – 97

Standard Guide for Conducting *Daphnia magna* Life-Cycle Toxicity Tests¹

This standard is issued under the fixed designation E 1193; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This guide describes procedures for obtaining laboratory data concerning the adverse effects of a test material (added to dilution water, but not to food) on *Daphnia magna* Straus, 1820, during continuous exposure throughout a life-cycle using the renewal or flow-through techniques. These procedures also should be useful for conducting life-cycle toxicity tests with other invertebrate species, although modifications might be necessary.

1.2 These procedures are applicable to most chemicals, either individually or in formulations, commercial products, or known mixtures. With appropriate modifications, these procedures can be used to conduct tests on temperature, dissolved oxygen, pH, and on such materials as aqueous effluents (also see Guide E 1192), leachates, oils, particulate matter, sediments, and surface waters. The technique, (renewal or flow-through), will be selected based on the chemical characteristics of the test material such as high oxygen demand, volatility, susceptibility to transformation (biologically or chemically), or sorption to glass.

1.3 Modification of these procedures might be justified by special needs or circumstances. Although using appropriate procedures is more important than following prescribed procedures, results of tests conducted using unusual procedures are not likely to be comparable to results of standard test procedures. Comparison of results obtained using modified and unmodified versions of these procedures might provide useful information on new concepts and procedures for conducting life-cycle toxicity tests with *D. magna*.

1.4 This guide is arranged as follows:

	Section
Referenced Documents	2
Terminology	3
Summary of Guide	4
Significance and Use	5
Hazards	8

	Section
Apparatus	6
Facilities	6.1
Construction Materials	6.2
Test Chambers	6.3
Cleaning	6.4
Acceptability	6.5
Reagents	7
Purity of Reagents	7.1
Dilution Water	9
Requirements	9.1
Source	9.2
Treatment	9.3
Characterization	9.4
Test Material	10
General	10.1
Stock Solutions	10.2
Test Concentrations(s)	10.3
Test Organisms	11
Species	11.1
Age	11.2
Source	11.3
Brood Stock	11.4
Food	11.5
Handling	11.6
Harvesting Young	11.7
Quality	11.8
Procedure	12
Experimental Design	12.1
Dissolved Oxygen	12.2
Temperature	12.3
Loading	12.4
Selection of Test System	12.5
Beginning the Test	12.6
Care and Maintenance	12.7
Feeding	12.8
Duration of Test	12.9
Biological Data	12.10
Other Measurements	12.11
Analytical Methodology	13
Acceptability of Test	14
Calculation of Results	15
Report	16
Keywords	17
Appendixes	
Appendix X1 Statistical Guidance	
Appendix X2 Food	

1.5 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use. Specific hazard statements are given in Section 8.

¹ This guide is under the jurisdiction of ASTM Committee E47 on Biological Effects and Environmental Fate and is the direct responsibility of Subcommittee E47.01 on Aquatic Assessment and Toxicology.
