

Standard Guide for Determining Uses and Limitations of Deterministic Fire Models¹

This standard is issued under the fixed designation E 1895; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This guide provides a methodology for the systematic evaluation of fire models, which may be used in fire hazard analyses.

1.2 This guide provides a means of identifying both general and specific limitations of fire models for specific applications.

1.3 This guide is intended to assist model developers, model users, and authorities having jurisdiction in assuming the responsible use of fire models.

1.4 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

2. Referenced Documents

2.1 ASTM Standards:

E 176 Terminology of Fire Standards²

E 603 Guide for Room Fire Experiments²

E 1355 Guide for Evaluating the Predictive Capability of Fire Models²

E 1472 Guide for Documenting Computer Software for Fire Models²

E 1474 Test Method for Determining the Heat Release Rate of Upholstered Furniture and Mattress Components of Composites Using a Bench Scale Oxygen Consumption Calorimeter²

E 1546 Guide for Development of Fire-Hazard-Assessment Standards²

E 1591 Guide for Data for Fire Models²

2.2 Other Documents:

Survey of Computer Models for Fire and Smoke, Raymond Friedman, Factory Mutual³

NIST Handbook 146, Technical Reference Guide for the Hazard I Fire Hazard Assessment⁴

Technical Reference Guide for FPE Tool, Version 3.2, NISTIR 5486⁴

The SFPE Handbook of Fire Protection Engineering, 2nd Edition, Section 3, Chapter 15⁵

3. Terminology

3.1 *Definitions*—Definitions used in this guide are in accordance with Terminologies in E 176, unless otherwise indicated.

4. Significance and Use

4.1 This guide provides recommendations for fire model users and authorities having jurisdiction in establishing the limitations of fire models in fire risk and fire hazards assessments. The guide also makes recommendations for fire model developers to identify appropriate uses and limitations of their model.

4.2 This guide is intended to assist in evaluating the appropriate use of fire models in fire assessment. These types of assessments are employed in product development, as well as in design and construction. Further guidance can be found in Guide E-1546.

4.3 This guide is not intended to address all or limit any methods of evaluating proper use of a fire model. It does address the use of fire models in fire hazard assessment. Other uses of fire models include post-fire analysis, research, education, and litigation.

4.4 The primary emphasis of this guide is on zone models of compartment fires. However, other types of mathematical models need similar evaluations of their prediction capabilities.

5. Guidance for Model Users

5.1 A model user's first step should be to define the scope of the intended fire risk or fire hazard assessment, or both, and then determine if fire modeling is an appropriate tool to provide information for the decision making process.

5.2 The user should then determine what models are available for use. Some are proprietary or not otherwise accessible.

5.2.1 The ability of the user's computer hardware, considering the size and complexity of the assessment, will also limit what fire models can be used.
