

Designation: F 1762 – 9702

Standard Practice for Exposing a Membrane Switch to Variation in Atmospheric Pressure¹

This standard is issued under the fixed designation F 1762; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This practice covers a procedure for exposing a membrane switch to variations in atmospheric pressure. It can be used to determine the effects of pressure variations on chemical and mechanical properties and functional characteristics of the switch.

¹ This test method is under the jurisdiction of ASTM Committee F-1 F01 on Electronics and is the direct responsibility of Subcommittee F01.18 on Membrane Switches
