

Standard Consumer Safety Specification for Portable Bed Rails¹

This standard is issued under the fixed designation F2085; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

INTRODUCTION

This consumer safety specification addresses portable bed rail incidents that were identified by the U.S. Consumer Product Safety Commission (CPSC).

In response to incident data supplied by the CPSC, this consumer safety specification attempts to minimize the following type of potential hazard through labeling and performance requirements: entrapment between the portable bed rail and mattress in the bed rail structure and entanglement on protrusions. Entrapment of a child by the head or neck can result in asphyxiation.

This consumer safety specification is written within the current state-of-the-art of portable bed rail technology. It is intended that this specification will be updated whenever substantive information becomes available that necessitates additional requirements or justifies the revision of existing requirements.

This consumer safety specification is not intended to address all the hazards of bed rails that are either blatantly misused or used in a careless manner that disregards the instructional literature and warning statements provided with each bed rail.

1. Scope

1.1 This consumer safety specification establishes requirements for the performance of portable bed rails. It also contains requirements for labeling and instructional literature. This consumer safety specification does not cover guardrails that fall under the scope of Consumer Safety Specification F1821 or guardrails that are designed for a specific model of bed and which attaches at the headboard or footboard.

1.2 This consumer safety specification is intended to minimize hazards to children resulting from normal use and reasonably foreseeable misuse of portable bed rails.

1.3 For the purpose of this consumer safety specification, a portable bed rail is a device intended to be installed on an adult bed to prevent children from falling out of bed. These bed rails are intended for children who can get in and out of an adult bed unassisted (typically from 2 to 5 years of age).

1.4 No bed rail as defined in 3.1.1 that is produced after the approval date of this consumer safety specification shall, either

by label or other means, indicate compliance with this specification unless it conforms to all the requirements contained herein.

1.5 This consumer safety specification includes the following sections:

Title	Section
Scope	1
Referenced Documents	2
Terminology	3
Calibration and Standardization	4
General Requirements	5
Performance Requirements	6
Structural Integrity	6.1
Openings	6.2
Enclosed Openings	6.3
Openings Created by Bed Rail Displacement of Adjacent Style	6.4
Portable Bed Rails	
Openings Created by Displacement of Mattress-Top Portable	6.5
Bed Rails	
Openings Created by Displacement of Portable Bed Rails Intended for Use on Specific Manufacturers' Beds	6.6
Protrusions	6.7
Openings Between Bedposts (Headboard, Footboards, Etc.) and Ends of Portable Bed Rail	6.8
Bedrail components requiring consumer assembly	6.9
Test Equipment	7
Test Beds	7.1
Torso Probe	7.2
Wedge Probe	7.3
Ring Gauge	7.4
Weight Gauge	7.5
Force Gauge	7.6
Test Methods	8

¹ This consumer safety specification is under the jurisdiction of ASTM Committee F15 on Consumer Products and is the direct responsibility of Subcommittee F15.11 on Bed Rails.

Current edition approved Jan. 1, 2012. Published January 2012. Originally approved in 2001. Last previous edition approved in 2010 as F2085 – 10a. DOI: 10.1520/F2085-12.
